3. SUPPORT SYSTEMS

Family contact/involvement (F1)
- Sister limits contact due to pattern of harassing her w/ delusions
- little contact z other sisters/mom, estranged. will be.

Support network

☐Family/significant other ☐Social/recreational ☒Community mental health resources
☐Educational/vocational ☐Spiritual ☐Peer
☐Other

Explain other: under commitment will be assigned CCM. - Patti Fields (651) 266-4389 resolved. Question re: which county, both say other should be CCM.

Comments and contact information including name, address, phone number

new to client. w/ hospice George Lopez, CCM Ramsey County Human Services 160 E. Kellogg Blvd. St. Paul, MN 55101 (651) 266-4039

Significant social relationships (past and present):
- Hx of rel. z therapist
- Father's siblings, sisters/mom → estranged
- Current friend Pat Morris (religious connection)

4. NEEDS/STRENGTHS/PLAN RELATED TO TREATMENT AND DISCHARGE

NEEDS	STRENGTHS
- stabilize MH, restore to capacity	- Takes medication
- Insight into MI (grandiose)	very communicative
- learn to identify appropriate boundaries/not harass others	- Has hx of seeing MD, participating in tx process
- address concerns re: apt in community z CCM, SW	- Has responded well to medication

History of physical, emotional or sexual abuse: My family was rejecting, shaming. Sister reports parent has hx of violence sexually inappropriate behaviors but chooses not to give details.

MI or CD issues in family ☐ Yes ☒ No Describe: unknown

Diversity issues affecting treatment

Describe:

- ☐ Age
- ☒ Spiritual
- ☐ Socioeconomic
- ☐ Learning potential
- ☐ Other
- ☐ Health
- ☐ Language barrier
- ☐ Sexual orientation
- ☐ Cultural/ethnic

I'm a secular religions "don't want to be persecuted.

Explain other:

Faith is a resource, fears persecution

Employment/occupation history: Pizza Hut, Post office, Acting, Tax preparation (New Orleans) writer- 2001 2 mo. 2001- 2 haunted houses.

Employment status: Alias from BHIS "lay religions"

Education history: Catholic elementary, HS → Washburn Reports history of attending several colleges, unclear if reliable info.

Highest grade completed: Alias from BHIS

St. John's U of M-B-?.. Education M.A. History Phd. - History

Military service: Alias from BHIS

no ROTC 1 year in college.

Legal history/issues impacting current treatment and discharge planning:

Hx of repeatedly calling, faxing letters to many people and institutions re: delusions of persecution. Threatens others at times, accusatory nature.

Legal status: Alias from BHIS Delusions of grandeur

Rule 20.01

felony terroristic threats

MH/psych and CD history past three years (life span if MSOP):

Dr. Hall - med monitoring last couple years - stable. (St addict to AMRTC

HCMC records indicate multiple admissions over the years to HCMC, AMRTC, and a prison unit in Georgia (1974) for "dining and dashing"

VULNERABILITIES

Talks non-stop when decomp. (may annoy others, provoke)
Accuses others & delusions (annoying others)
Poor insight into MI (calling others, harassing)

Needs financial management intervention ☐Yes ☒No Describe: unknown

Social work intervention plan, including high-risk therapeutic issues: (F1)

- Treat mental illness, restore to capacity per Rule
- assist w/ planning to maintain apt. or move
- assist w/ questions re: bill & AMRTC, MA status.

Discharge/aftercare planning recommendations including input from case manager, family& patient: (F1)

- Discharge to Ramsey County ADC when competent to proceed w/ legal charges.
- CCM to continue intervention in community.
- client would like to move out of state near family for a fresh start.

5. FORENSIC ONLY

Legal contacts:

Craig Boone - Public Defender

Commitment status:

MI, Rule 20

Legal basis for commitment:

Rule 20

Summary of dangerous behaviors:

Threatening behavior/Harassment to court clerks, w/d/m staff due to decompensation, delusions. Rule 20 for criminal charges.

Name of preparer: Tonia Willand Date: 9/16/02

Signature: [signature]

- wants to move out of state for fresh start - location keeps changing - unclear if realistic.
- Showed this SW proof of oblate status @ St. John's Abbey.
- Apt. in community. Rent auto-paid, RSDI deposited.
- 1976 to 1983 lived @ Build Hall

STATE OPERATED SERVICES

HISTORY AND PHYSICAL ASSESSMENT

1. CHIEF COMPLAINT/HISTORY OF PRESENT ILLNESS

Patient name: _____ BHIS #: _____

Date of assessment: 9/10/02 Time of assessment: 1:15 P.M.

Gender ☒ M ☐ F Age: 33yr.

Staff present during exam: ☐ Y ☒ N

Chief complaint:

= "I have no real concern."
= Non-suicidal.

History of present illness:

2nd admission = age: 25 (1st Admit) → Frustrated = 1 month + cancelled bed = Schizophrenia / paranoid type. Compliant w/ meds.

Past medical history (General health, infectious disease, surgeries and injuries, previous hospitalizations, review of available old medical records/lab tests, specific procedures)

= Surgery: minor's ? = 5th finger (L).
Multiple tatts — 4 yrs. old.
= In fair health.
= Patient wt: 190 lb.

Family medical history:

= Parents are DO = healthy
= ① Bro Russ
② DC Mrs > healthy

Current medications

Risperadal 3 mg (1) daily
Ativan 1 mg daily
Haldol 1 mg q 8-12 pm.

Allergies

Medications: NKA

Part VI: Initial Rehabilitation Functional Skills Screen Summary

Information obtained from: ✓Patient, __Previous Chart, ✓Pre-Admission Screening

Pre-Admission Screening has identified/recommended _____as a placement site.
✓Pre-Admission Screening did not recommend a placement site.
__ Rule 20.

I A. Patient has the following skills: (Check all that apply)

- ✓Able to get around in the community.
- ✓Able to use a phone directory/411
- ✓Knows how and when to use 911
- ✓Able to converse socially
- ✓Able to follow 2 & 3 step directions
- ✓Is oriented to time, place, and day
- ✓Able to obtain meals when living in the Community.
- ✓Has all necessary Personal Identification
- ✓Able to write checks
- ✓Able to identify situations that cause frustration./anger
- ✓Able to distinguish correct change
- ✓Able to plan a Leisure Activity.
- ✓Able to structure free time
- ✓Able to identify supportive resources (CSP)
- ✓Able to locate and utilize Leisure Resources
- ✓Willing to initiate social contacts with family/friends

I B. Current Functional Skill Strengths and Leisure/Social Resources related to discharge.

Patrick states he has lived independently for years & is able to cook & shop for self as well as handle his finances. He states he does have a drivers license but uses the bus to get around. Patrick states his leisure interests include visiting books, being on active & religion. PT states need to work on coping skills currently he states that he holds all his feelings inside.

II. Recommended OT and TR treatment interventions/modalities.

Modalities to address ↑ knowledge of coping skills & practice of these skills

III. Comments: (Include patient's appearance, communication style, attention span. Add any specific requests the patient has made, ie; ability to get to appointments/groups, how and when patient would like to be reminded/prompted and any diversity needs to consider.)

Patient noted to be talk non-stop. His statements appear to be grandiose. He felt need to show his therapist identifications he had with him & show the many organizations he is affiliated with

Occupational Therapy
Kitchen Evaluation
(Non-standardized)

The treatment team of Unit D requested an Independent Living Skills assessment for Patrick O'Dougherty. The kitchen evaluation administered on 12-31-02 was designed to assess Patrick's knowledge of nutritional needs, safety in the kitchen, and actual observation of his skills while preparing a package of Lipton flavored noodles. In addition, the therapist is able to assess the ability of the patient to read and follow written and verbal directions, organize and sequence the task and sub-tasks, time the cooking, judge when the noodles are cooked, and complete thorough clean up of utensils and area. Results follow:

Nutrition – Patrick was able to identify 6/6 food groups and identify a well-balanced meal. He prefers to make simple things like soups, cereals, and sandwiches.

Safety in the kitchen – Patrick washed his hands before and during the cooking task. He stirred frequently to prevent food from burning, turned off the burner, and cooked with the panhandles inward. He washed the dishes with cold soapy water and did not rinse the soap off before wiping. He was asked a series of questions related to the prevention and treatment of injuries while in the kitchen. Patrick stated he would use a hot pad to prevent burns and treat a minor burn with cold water. He would prevent falls by making sure the floor was dry and free from spills. When asked how do you prevent electric shock he reported that he would have the right fuse. He stated he would put out a grease fire with baking soda and if his clothes caught on fire he would stop, drop, & roll. He reported that he would keep tuna in the refrigerator for about a day. When asked why it is important to wash your hands and counter tops after handling raw meat, he replied to prevent the spread of bacteria.

The actual cooking task – Patrick read and referred to the printed directions when questions arose. He was able to follow verbal directions given by the therapist also. He correctly gathered the supplies, sequenced the tasks, measure the ingredients, and timed the food. He also was able to engage in conversation while completing the task.

Recommendations – Patrick has the skills and abilities to be safe in the kitchen while preparing a meal. He did participate in a review of kitchen safety after the kitchen assessment to clarify how to prevent electric shock and how to wash dishes.

Respectfully,

Aimee House OTR/L

NEUROPSYCHOLOGICAL EVALUATION

NAME:	O'DOUGHERTY, Patrick	**EDUCATION:**	16+graduate courses
AGE:	56	**BIRTH DATE:**	12-11-1946
GENDER:	Male	**PROGRAM:**	CCU
DATES OF EVALUATION:	3-5-03	**HAND DOMINANCE:**	Left

REFERRAL AND BACKGROUND INFORMATION: Mr. O'Dougherty is a 56-year-old male with an extensive psychiatric history, dating back to 1989, related to symptoms of Schizophrenia, Paranoid Type. The patient was committed as mentally ill through Hennepin County under Rule 20 conditions of criminal procedure due to a charge of terroristic threats. On 10-29-02, this examiner conducted a treat to competency evaluation and concluded that the patient was competent to proceed to trial; however, the Court concluded that the patient was not competent and likely never would achieve competency. The Court ordered another competency evaluation in six months time; therefore, this examiner completed neuropsychological testing to assist in determining the patient's intellectual and neurocognitive abilities, such as attention, memory, language, and executive functioning skills.

O'Dougherty has been psychiatrically hospitalized on numerous occasions at HCMC, Metropolitan Medical Center, AMRTC and in Georgia. The patient's symptoms include grandiose delusions, often revolving around left-wing political movements, disorganized thinking, evidenced by loosening of associations, and paranoia. When treated with antipsychotic medication, the patient can focus on the topic of conversation, understands his need for medication and ongoing treatment and actively participates in treatment groups. There is no evidence of a substance abuse history and the patient's medical history is similarly unremarkable. During the neuropsychological interview, he reported a history of tardive diskinesia, but a change in medication ameliorated that problem. When asked if he has noted any problems with attention, memory, thinking or concentration, he stated, "I'm at an age that I'm not as sharp as I once was."

Mr. O'Dougherty does not appear to have a family history of mental illness. His father was employed as an attorney and his mother was reportedly active in local politics. The patient has three sisters, all with graduate degrees and one brother who owns a business and has an engineering degree.

During the neuropsychological interview Mr. O'Dougherty stated that he completed a B.S. in education at St. John's University and went on to complete an MA and PhD in "intellectual history." While records indicate that he completed his undergraduate degree his graduate degrees are unsubstantiated. Mr. O'Dougherty reported that he always did well in school, excelling in history, and English but consistently struggled with math courses and the "hard sciences." The patient indicated that he began working at the age of eleven as a paperboy. In college, he was employed in the library and then managed his family's apartment building for many years. He described his involvement in various political organizations, but when doing so his statements became difficult to track and his speech became tangential and at times incoherent.

BEHAVIORAL OBSERVATIONS: Mr. O'Dougherty was amicable and cooperative throughout the testing procedures. He was casually dressed and adequately groomed, alert and oriented in all spheres. His speech was of normal rate, rhythm and volume, although its content was noteworthy for occasional grandiose themes and loosening of associations. Generally, Mr. O'Dougherty's mood was euthymic, although he stated he was distressed over his legal situation and expressed concern about the Court's decision. The patient indicated that he experienced a rare recurrence of suicidal ideation over the past weekend, but felt better after discussing his thoughts with staff.

The patient stated that he enjoys tests, but as the session wore on, he appeared fatigued. Near the latter portion of the testing session, he appeared to take a more careless approach to the tasks, which might have lowered his performance, in particular, on a biletter cancellation task. Nevertheless, Mr. O'Dougherty appeared to persevere through much of the testing and seemed vested in performing optimally. Generally, his results likely an accurate reflection of his current level of cognitive functioning.

TESTS ADMINISTERED:

Wechsler Abbreviated Scale of Intelligence (WASI)
Wide Range Achievement Test-3 Reading (WRAT-3)
Repeated Battery for the Assessment of Neuropsychological Status (RBANS)
Letter Cancellation
Porteus Mazes
Color Trails
Finger Tapping

TEST RESULTS:

WECHSLER ABBREVIATED SCALES OF INTELLIGENCE (WASI)

Ability Level	Verbal IQ	Performance IQ	Full Scale IQ
Above Average	131		120
Average		109	
Low Average			
Much below average			

ACADEMIC ACHIEVEMENT

Academic Area	Standard Score	Grade Equivalent	Percentile
Reading	117	Post High School	87th percentile
Spelling			
Arithmetic			

NEUROCOGNITIVE DEFICITS:

Area	None	Low Avg.	Mild	Moderate	Severe
Attention		X			[illegible] Cancellation
Immediate Memory	X				
Visual /Constructional			X		
Delayed Memory		X			
Language		X			
Executive Functioning	Mazes				Trails B
Motor Speed	Finger Tapping (both hands)				

SUMMARY: Mr. O'Dougherty is a 56-year-old male with a history of Schizophrenia, Paranoid Type who was committed under Rule 20 conditions through Hennepin County. He was seen for neuropsychological assessment to assist in determining his intellectual and neurocognitive abilities.

Administration of the Wechsler Abbreviated Scales of Intelligence (WASI) revealed intellectual functioning in the Superior range with a wide discrepancy between his verbal abilities, in the Very Superior range and visuospatial abilities, in the Average range. This difference is in the direction one would expect however, given his history of difficulties with math and science. Mr. O'Dougherty's reading ability, as measured by achievement testing, revealed that he is reading at the post high school level.

Mr. O'Dougherty's neurocognitive results indicate variable performance, from no impairment to severe impairment on two subtests. Areas of severe impairment were noted for the scanning and tracking aspects of attention, and alternating attention between two competing stimuli. These results however may in part reflect the patient's fatigue, as these tests were administered later in the session and to his eyesight difficulties. Mild impairment was noted for visuospatial abilities, which corroborates the wide discrepancy between his verbal and performance scores on psychomoteric intellectual measures.

There was no impairment in functioning in most areas. Below average performance was demonstrated for general attention tasks, a straightforward vigilance task, delayed memory and language abilities. His language performance was lowered by a task requiring verbal initiation. Above average performance was noted for immediate memory functioning as well as for motor speed with both hands.

IMPRESSIONS AND RECOMMENDATIONS:

Overall Degree of Impairment:

Cognitive Abilities:	Mild
Adaptive Functioning:	Mild

Localization of Impairment: Right hemisphere with frontal lobe involvement

Neuropsychological Diagnosis:

Axis I: Cognitive Disorder Not Otherwise Specified

Neuropathological Implications: Results of the current evaluation reflect right hemisphere, frontal lobe involvement. Whether Mr. O'Dougherty's performance is a decline from his previous functioning is unknown given the absence of baseline data against which to compare, although based on psychometric intellectual functioning, one would expect higher neurocognitive scores. The etiology of the patient's cerebral functioning status is likely attributable to the effects of chronic Schizophrenia. His results reflect attention difficulties for tasks requiring scanning and shifting cognitive sets, and spontaneous verbal production indicative of hypofrontality. Developmental factors are likely underlying lower scores for tasks involving the right hemisphere. A subsequent decline in general cerebral functioning secondary to chronic Schizophrenia, results in visuospatial skills in the mildly impaired range, while tasks relying on verbal skills fall within the range of no impairment, due to exceptional premorbid verbal abilities.

Mr. O'Dougherty appears to be at psychiatric baseline; therefore, one would not expect significant improvement in cerebral functioning. However, if further psychiatric stabilization

occurs, improvement in some aspects of attention may be observed. Furthermore, the patient's memory functioning may be benefited by instruction in prospective memory strategies (remembering to remember).

Behavioral Implications: The current test results do not indicate behavior problems in themselves. He has the ability to anticipate consequences and perform problem-solving tasks.

Therapeutic Implications: Based on the available information it is anticipated that Mr. O'Dougherty will have minimal difficulty participating in most therapeutic approaches, provided there is adequate structure and expectations are made clear. Verbal methods to convey information will maximize his attention ability thus aid in memory functioning. Mr. O'Dougherty's memory benefits from cuing, and he demonstrates above average memory performance when information is organized in to a meaningful context, rather than presented as unrelated data. His attention might be improved by offering him support through psychotherapy or daily, brief one-to-one sessions, as stress appears to increase cognitive disorganization.

Implications for Daily Living: These results suggest that this individual may have the ability to return to essentially independent living provided there is community support in the form of medication monitoring. This recommendation is based solely on his neurocognitive abilities and does not take into account other factors, such as psychiatric issues. In terms of competency to stand trial: while Mr. O'Dougherty demonstrates deficits in some aspects of attention and shifting cognitive sets, his general attention, memory, language and problem solving skills are not impaired and indicate that cognitively, he has the capacity to understand information and make reasonable decisions. While he exhibits disorganized speech and his statements are incomprehensible at times, he completed over three hours of fatiguing tests, during which, he stayed focused on the task to the degree that his performance was unimpaired in most areas.

Please direct further questions to me at (763) 712-4228.

STATE OPERATED SERVICES
PSYCHIATRIC ASSESSMENT

IDENTIFICATION DATA

Assessment Date: 9-10-02 Assessment Time: 3:15 pm

Gender: Male Age: 55

City:
State:

Marital Status: Single Race: Caucasian
Education: PhD in history Religion: Roman Catholic

Occupation: He was once a Professor at the University of Minnesota.

Referral Source: HCMC and court papers, patient himself who was unreliable throughout most of the interview. He does have a advance directive status informal living well, and his court authorized medications status is no. His legal status is DC/MI 8-21-02 expires 2-21-03.

I. COMPLAINT/PRESENT ILLNESS

Chief complaint: "Some people said that I harassed them so the court sent me here."

History of Present Illness: A coherent medical history was difficult to obtain because the defendant was often guarded, tangential and non seneschal in his responses. He is currently here on a Rule 20.01 Subdivision 5 commitment. Records indicate that the patient has allegedly been harassing and threatening the History Department at the University of Minnesota since 1989. The Officer investigating his current harassment was sent a fax from Mr. O'Dougherty saying that he had a felony and that the police feel that Mr. O'Dougherty was going to get him fired. The defendant stated he had gotten a large number of people hired and fired within the University of Minnesota. In December 2001 the officer investigated another complaint of harassment against the defendant and in January 2, 2002 the patient left a message on the officers voice mail threatening to have him court marshaled and implicated in a cover up in the murder of Jacob Wetterling and other youths in the St. Cloud area. He was charged on March 15, 2002 with a gross misdemeanor count for harassment for this. On July 2, 2002 Mr. O'Dougherty made threats to a judge of Hennepin County Court. On July 2, 2002 he spoke to a receptionist and made threats to this judge. On July 5, he was in the Hennepin County Courthouse and demanded financial information on three judges. On July 8, he was back making another disturbance at the Government Center. He stated that certain judges are responsible for the routing of Highway 55 and deporting a Port Rican female. He was arrested on July 8 and charged with one count of felony terroristic threats. He was transferred to HCMC on August 8, 2002. Records from HCMC in Minneapolis indicate that the patient has created a diagnosis of schizophrenia, paranoid type for many years and has had multiple prior psychiatric hospitalizations at HCMC Metropolitan Medical Center, Anoka Metro Regional Treatment Center and at a Prison Medical Unit in Georgia. He has a prior admission at Hennepin County Medical Center from June 5 to June 23 1989 predicated by his threats to the University of Minnesota History Department staff and agitated behavior on campus. Another admission from April 10 to April 21st, 1989 was reciprocated by the patients threats to professors at the University and a decision to drive to visit Senators in Washington while evidence in grandiose delusional threatening ideas. Records indicate that the patient was also brought to Hennepin County Medical Center Crisis Intervention Center on May 2, 1996 following concerns regarding his decompensation and alleged threatening letters and phone call to staff at the Neuman Center at the University of Minnesota as well as the priest. The patient was then transferred to Adult Psychiatry and evaluated by Dr. Bruggemeyer on May 6, 1996. She noted that the patient appeared vicarious, very difficult to interrupt, rambling and tangential and over inclusive. He was religiously pre-occupied and spoke about militaristic directions in the human center. During the course of this hospitalization the patient was noted to have a full scale IQ of 101 and test results revealed minor impairments in his non-verbal abilities, the media and delayed recall and working memory. At that time he also

demonstrated perseverative tendencies. The test results were consistent with organic cerebral dysfunction and was eventually discharged on May 29, 1996 with a diagnosis of schizophrenia paranoid type with continuous and mild tardive dyskinesia. Medical records subsequent to 1996 were not available as other patients prior treatment history, although it is noted in records that the patient has tried anti psychotics including Prolixin, Mellaril and Haldol as well as Risperdal, Thorazine and Cogentin. Pre-admission assessment shows that the patient is currently on Risperdal Elixir 2 mg.

2. HARM POTENTIAL/ALCOHOL/DRUGS

Harm Potential

Ever thought about suicide: Denies.

Circumstances:

When was the last time: Denies.

History of suicide attempts:

When and how:

Current self harm potential: Denies.

Current harm to others potential: Denies.

ALCOHOL/SUBSTANCE USE

Average number of drinks per day: Denies.

Has patient ever felt or been told that he/she is drinking too much? Denies.

History of Blackouts, Delirium Tremens, Seizures: Denies.

Ever used drugs of abuse? Denies.

Last time patient took drugs: Denies.

Drugs of abuse: Denies all drugs of abuse.

3. PSYCHIATRIC/FAMILY HISTORY

Past psychiatric history: Per court records the patient's sister reported that the patient has suffered from schizophrenia for greater than 30 years and had decompensated in the last year. Records from HCMC indicate that the patient has an extensive psychiatric treatment history with multiple hospitalizations for the treatment of schizophrenia paranoid type. During prior psychiatric hospitalizations the patient evidence psychotic symptoms inclusive of the following: Grandiose and paranoid thinking, disorganized thinking, rambling, tangential and over inclusive speech as well as religious preoccupation. Per the patient he had been diagnosis once in 1996 with bipolar schizophrenia and hypo[illegible] and defensive personality.

Childhood developmental/psychiatric problems: He denies.

History of physical, emotional or sexual abuse: He denies.

Patient Name: Patrick O'Dougherty **BHIS:** 39972

Family structure: He states his mother's age is 82 and his mother's occupation is Social Worker, retired. He did not know his father's age but he stated that his father was deceased. His parent's marital status. His parents were married, widowed and mother remarried. Sibling #1, his name is Mike. He is 54 years old. He is a biological brother. Sibling #2 is Margaret, age 52, biological sister. Sibling #3 is Marianne, she is 49 years old, biological sister, Sibling #4 Maureen is a biological sister, age 48.

Family history of psychiatric problems, suicide attempts, drug abuse/alcoholism, psychiatric medications: Patient indicates that he has a paternal aunt with mental retardation.

Legal history: History of repeated harassments towards departments at the University of Minnesota beginning in 1989.

Military history: ROTC in college.

Social history: Per patient, the patient has no children and was never married. He lived in a 3 bedroom apartment in St.Paul with two other student roommates.

4. MEDICAL HISTORY

Sleep difficulties: Includes snores heavily. As he claims to have a little sleep apnea.

Smokes: Denies, although he states that he smoked several years ago as a teen. **Packs per day:**
Other uses of tobacco: Denies.

Number of cups of coffee, tea or cola per day: 3 to 4 cups of coffee and one cola.

Allergies: He states the Haldol causes gagging and Prolixin causes tardive dyskinesia as does Cogentin.

Health problems (including surgeries and traumatic brain injuries): He states that he had a tonsillectomy as a child as well as pneumonia as a child.

Sexual history including any sexual problems: The patient indicates that he is heterosexual and celibate at this time.

Current medications: Risperdal, 3 mg. as well as Ativan prn.

Medication history: Risperdal, Thorazine, Ativan, Prolixin, Haldol and Cogentin. Again he states that Haldol causes him gagging and Prolixin and Cogentin causes him tardive dyskinesia.

5. MENTAL STATUS EXAM

General appearance: Includes normal weight and age appropriate.

Attitude during interview: Was traumatic.

Dress and personal habits: Appeared appropriately groomed.

Motor behavior: Normal.

Speech: Excessive verbalization.

Comments: Excessive rambling and incoherent speech.

Facial expression: Anxious and stares into space.

Affective states: Include Euthymic.

Mood: Was elevated.

Thought processes: Included preservations, tangentially, blocking, halluce associations and flight of ideas.

Disorders of perception: Denies.

Thought content: Includes paranoid ideation.

Delusions: Persecutory grandiose.

Suicidal ideation: Denies.
Homicidal ideation: Denies.

Physiological parameters of psychological significance: Includes hypo _____. Comments: History of hypo _____ per patient.

Somatic complaints: Weight gain. Comments: Include 6 to 7 pound weight gain since June.

Alertness and level of consciousness (*alternative for cognitive exam is to use MMSE): Alert.

Orientation: Oriented to time, place, person and situation.

Memory: Within normal limits for all concentration.

Concentration: Serial sevens.

Abstract thinking: Able to abstract similarities.

Fund of information and intelligence: Is above average.

Comment on how intelligence was estimated: Was by quizzing him on historical events and simple mathematic calculations.

Judgment: Social judgment.

Insight: None.

Comments: Patient states that he is unusual but not delusional.

6. MINI MENTAL STATUS EXAM

ORIENTATION
What is the (year-1) (season-1) (date-1) (day-1) (month-1)? (Maximum 5 points) 5

Where are we (state-1) (county-1) (city-1) (hospital/clinic-1) (floor-1)? (5 points) 5

Patient Name: Patrick O'Dougherty **BHIS:** 39972

REGISTRATION

Have patient repeat three words after you have said them. Examiner says, Tony, purple, 128 (1 second to say each). Give 1 point for each word repeated correctly. (3 points) 3

Then repeat the words until patient learns all three. Count trials and record. ___

ATTENTION AND CALCULATION

Serial 7s (begin at 100 and subtract backwards by 7). Stop after 5 answers. One point for each Correct (5 points) 3

Alternatively, spell "earth" backwards. The score is the number of letters in correct order. ___

RECALL

Ask for the 3 objects repeated above. Give 1 point for each correct. (3 points) 3

LANGUAGE

Name a pencil and a watch. (2 points) 2

Repeat "No, ifs, ands, or buts." (1 point) 1

Follow a 3-stage command: "Take a paper in your right hand, fold it in half using both hands, And put it on the floor". (3 points) 3

Read and obey the following: "Close your eyes." (1 point) 1

Write a sentence. (1 point) 1

Copy design (1 point) 1

Total: 28

LEVEL OF CONSCIOUSNESS

Comments: Alert.

BIOPSYCHOSOCIAL FORMULATION

Biopsychosocial formulation: This is a 55 year old, Caucasian male, here under Rule 20.01 charged with one count of felony terroristic threats. The patient has a long standing history of paranoid schizophrenia with several past psychiatric hospitalizations. It unclear when his last hospitalization occurred. The patient has been off his medication since August 1 and was re-started again on August 19. He apparently decompensated at that time and has succumbed to a series of psychotic delusions. It can best be describec as paranoid. It is unclear at this time whether the patient has suffered any type of traumatic brain injury. He denies alcohol abuse or illicit drug usage at this time.

DIFFERENTIAL IMPRESSION

Axis I. Schizophrenia paranoid type.

Axis II. Deferred

Axis III. None

Axis IV. Legal problems
Lack of social support, and housing is a problem after discharge.

Patient Name: Patrick O'Dougherty **BHIS:** 39972

Axis V. Current GAF -- 30
Past Year GAF –

STRENGTHS
1. Highly educated.
2. Gentlemen with good communication skills.
3. Positive attitude about self-improvement and takes medications.
4. Good physical health.

WEAKNESS
1. Legal problems.
2. Poor insight into the delusional thoughts.

TREATMENT AND MANAGEMENT PLAN
1. Psychological assessment for appropriate group therapy referral.
2. Continue psychotropic medication treatment and adjustment.
3. Assessment of chemical dependency potential.
4. Follow up on legal problems.

Action Plan: Current nutritional status adequate

Comments (action plan):
Patrick appears to be adequately nourished per normal serum albumin, wt at 107% of upper end of RBWR, stable weight as well as self-reported good appetite and po intake. Regular diet appears appropriate. Pt excludes no major food groups and eats a relatively varied diet. Fluid intake is adequate. No difficulties chewing or swallowing. No bowel/elmination problems noted. Meds reviewed- no sig
fd-med interaction potential. Pt does take risperdal and haldol which can promote wt gain- he is aware of this. Briefly discussed ideas to prevent wt gain. Labs reviewed- no nutritional concerns here. Expect pt will continue to meet his nutritional needs while here at AMRTC. Appropriate nutritional goal would be no sig changes in weight. No scheduled RD f/u, but will be available per pt or staff request. RD will also follow monthly weights and intervene if significant change occurs.

Draft/Final: Final
